

WHAT IS CLAIMED IS:

1. A data processing system for managing electronic content information under control of data representative of at least one activity scheduled in a user's calendar.
2. The system of claim 1, comprising a control output for control of a data recording device for recording the electronic content.
3. The system of claim 1, having an input for receiving input data representative of an EPG.
4. The system of claim 1, having an input for receipt of the data representative of the activity.
5. The system of claim 1, wherein the managing comprises selecting specific content information based on a profile of the user.
6. The system of claim 5, wherein the profile comprises at least one of the following:
 - a preference regarding an attribute of the content information; and
 - a relative priority of the activity.
7. The system of claim 5, wherein the managing comprises recording the specific content information.
8. The system of claim 5, wherein the managing comprises creating a GUI for presenting an overview of the specific content information available in a first time slot other than a second time slot associated with the scheduled activity.
9. The system of claim 1, wherein the system dynamically adjusts the processing upon a user interaction with the calendar.

10. A method of enabling to manage a processing of electronic content information for an end-user, the method comprising controlling the processing based on availability of a time slot in a calendar of the end-user.

11. The method of claim 10, wherein the processing comprises recording the electronic content.

12. The method of claim 10, comprising processing the electronic content depending on an EPG.

13. The method of claim 10, comprising receiving data representative of the availability of the time slot.

14. The method of claim 10, wherein the managing comprises selecting specific content information based on a profile of the user.

15. The method of claim 14, wherein the profile comprises at least one of the following:

- a preference regarding an attribute of the content information; and
- a relative priority of an activity scheduled in the calendar.

16. The method of claim 14, wherein the managing comprises creating a GUI for presenting an overview of the specific content information available in a further time slot other than the time slot in the calendar.

17. The method of claim 10, comprising dynamically adjusting the processing upon a user interaction with the calendar.

18. Software for enabling an end-user to manage a processing of electronic content information, the software controlling the processing based on data representative of a calendar of the end-user.

19. The software of claim 18, wherein the processing comprises selectively recording the content information.

20. The software of claim 19, wherein the processing comprises playing out at least part of the recorded content information so as to have the played out content information substantially fitting within an available time slot.

5 21. The software of claim 18, for control of generating a GUI for presenting an overview of specific content information available in a time slot in harmony with the calendar.
